AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-25 (Canceled)

26. (Currently amended) ~~The configuration architecture of claim 1,~~ A configuration architecture comprising:

a host instance comprising a host application server and a host database schema; a customer instance corresponding to a customer, wherein the customer instance comprises a corresponding customer application server and a corresponding customer database schema;

a remote configuration engine for the host instance to receive host-defined data from a content factory, wherein the host-defined data comprises host-defined content and associated host-defined metadata; and

wherein the remote configuration engine further comprises~~[[ing]]~~:

a content factory export module for the content factory to export the host-defined content and the associated host-defined metadata, wherein the content

factory generates the host-defined content and the associated host-defined metadata;

a host-based import module for the host instance to import the host-defined content and the associated host-defined metadata, and is further to forward the host-defined content and the associated host-defined metadata to a host-based integration module; and

the host-based integration module for the host instance to integrate the imported host-defined content with the host-defined content in the host shared content repository, and the imported host-defined metadata with the host-defined metadata in the host host-based metadata repository; ~~and[[.]]~~

Appl. No. 10/028,856
Docket No. 002659.P017 (9109)
Amdt. dated February 1, 2007
Reply to Office Action mailed on November 17, 2006
Customer No. 27752

a customer configuration engine for the customer to configure the host-defined data and host-defined rules, wherein the host-defined rules are generated by a host-based rules engine.

27. (Original) The configuration architecture of claim 26, wherein the remote configuration engine further comprising:

a host-based export module for the host instance to export the host-defined metadata to the customer;

a customer-based import module for the customer instance to import the host-defined metadata, and is further to forward the host-defined metadata to a customer-based integration module; and

the customer-based integration module for the customer instance to integrate the host-defined metadata with the host-defined metadata in the customer host-based metadata repository.

28. (Original) The configuration architecture of claim 27, wherein the content factory comprises a remote content formatting and editing tool.

29. (Currently amended) ~~The configuration architecture of claim 1.~~ A configuration architecture comprising:

a host instance comprising a host application server and a host database schema; a customer instance corresponding to a customer, wherein the customer instance comprises a corresponding customer application server and a corresponding customer database schema;

a remote configuration engine for the host instance to receive host-defined data from a content factory, wherein the host-defined data comprises host-defined content and associated host-defined metadata;

Appl. No. 10/028,856
Docket No. 002659.P017 (9109)
Amdt. dated February 1, 2007
Reply to Office Action mailed on November 17, 2006
Customer No. 27752

a customer configuration engine for the customer to configure the host-defined data and host-defined rules, wherein the host-defined rules are generated by a host-based rules engine; and

wherein the customer configuration engine further comprises:

a host export module for the host to export the host-defined data and the host-defined rules, wherein the host-defined data comprises the host-defined content and the host-defined metadata;

a customer-based import module for the customer to import the host-defined data and the host-defined rules, wherein the customer-based import module is further to forward the host-defined data and the host-defined rules to a customer-based integration module; and

the customer-based integration module for the customer to integrate the host-defined data with the customer-defined data, and the host-defined rules with the customer-defined rules.

30. (Original) The configuration architecture of claim 29, wherein the integration comprising:

modifying the host-defined data with the customer-defined data, and the host defined rules with the customer-defined rules;

substituting the host-defined data with the customer-defined data, and the host-defined rules with the customer-defined rules; and

reprogramming the host-defined data and the host-defined rules by the customer.

Claims 31-46 (Canceled).

46. (Currently amended) ~~The configuration system of claim 45,~~ A configuration system comprising:

Appl. No. 10/028,856
Docket No. 002659.P017 (9109)
Amdt. dated February 1, 2007
Reply to Office Action mailed on November 17, 2006
Customer No. 27752

a host instance comprising a host application server and a host database schema, wherein the host database schema comprises host-defined data comprising host-defined content and associated host-defined metadata;

a customer instance corresponding to a customer, wherein the customer instance comprises a corresponding customer application server and a corresponding customer database schema comprising host-defined metadata and customer-defined data comprising customer-defined content and associated customer-defined metadata;

a host-based rules engine to generate host-defined rules;

a customer-based rules engine to generate customer-defined rules;

a remote configuration engine for the host instance to receive the host-defined data from a content factory; and

wherein the remote configuration engine further comprises:

a content factory export module for the content factory to export the host-defined content and the associated host-defined metadata, wherein the content factory generates the host-defined content and the associated host-defined metadata;

a host-based import module for the host instance to import the host-defined content and the associated host-defined metadata, and is further to forward the host-defined content and the associated host-defined metadata to a host-based integration module; and

the host-based integration module for the host instance to integrate the imported host-defined content with the host-defined content at the host instance, and

the imported host-defined metadata with the host-defined metadata at the

host instance;[[.]] and

a customer configuration engine for the customer to configure the host-defined data and the host-defined rules.

Appl. No. 10/028,856
Docket No. 002659.P017 (9109)
Amdt. dated February 1, 2007
Reply to Office Action mailed on November 17, 2006
Customer No. 27752

47. (Original) The configuration system of claim 46, wherein the remote configuration engine further comprising:

a host-based export module for the host instance to export the host-defined metadata to the customer;

a customer-based import module for the customer instance to import the host-defined metadata, and is further to forward the host-defined metadata to a customer-based integration module; and

the customer-based integration module for the customer instance to integrate the host-defined metadata with the host-defined metadata at the customer instance.

48. (Currently amended) ~~The configuration system of claim 45,~~ A configuration system comprising:

a host instance comprising a host application server and a host database schema, wherein the host database schema comprises host-defined data comprising

host-defined content and associated host-defined metadata;

a customer instance corresponding to a customer, wherein the customer instance comprises a corresponding customer application server and a corresponding customer database schema comprising host-defined metadata and customer-defined data comprising customer-defined content and associated customer-defined metadata;

a host-based rules engine to generate host-defined rules;

a customer-based rules engine to generate customer-defined rules;

a remote configuration engine for the host instance to receive the host-defined data from a content factory; and

a customer configuration engine for the customer to configure the host-defined data and the host-defined rules: [[.]] and

wherein the customer configuration engine further comprises:

Appl. No. 10/028,856
Docket No. 002659.P017 (9109)
Amdt. dated February 1, 2007
Reply to Office Action mailed on November 17, 2006
Customer No. 27752

a host-based export module for the host instance to export the host-defined data and the host-defined rules;

a customer-based import module for the customer to import the host-defined data and the host-defined rules, wherein the customer-based import module is

further to forward the host-defined data and the host-defined rules to a customer-based integration module; and

the customer-based integration module for the customer to integrate the host-defined data with the customer-defined data, and the host-defined rules with the customer-defined rules.

49. (Original) The configuration system of claim 48, wherein the integration comprising:
modifying the host-defined data with the customer-defined data, and the host-defined rules with the customer-defined rules;
substituting the host-defined data with the customer-defined data, and the host-defined rules with the customer-defined rules; and
reprogramming the host-defined data and the host-defined rules by the customer.

Claims 50-103 (Canceled)
